12)

USER INTERFACE DESIGN; User interface design is the process designers used to build interfaces in software or computerized devices focusing on looks or style. Designers aim to create interfaces which users find easy to use and Pleasurable.

Types of user Interface :

1) Graphical user Interface :

GUI or Graphical user Interface is the type of interface with which the majority of people are the most familiar, which we interact these interface by using a mouse and click on graphics or icons.

Gui is a computer program that enables a person to communicate with a computer through the use of symbols.

E.x : Microsoft word, Paint, V.S.Code, Chrome, etc.

2) Form based interface :

A form based interface is an interface which user interacts with the application by selecting one of the number of possible values and by entering text into the fields that accept it.

E.x : Google forms, Project.

3) Menu Driven Interface;

It provides you with a range of commands or options in form of a list or menu displayed in full-screen.

Ex: ATM, game machines, laptop.

4) Natural language interface

A natural language is a user interface in which the user and system communicate via natural (human) language.

Ex: Alexa, Siri, etc.

5) Command line interface;

The command line interface is the type of interface where there is no common as a form a basic user interface in everyday consumer products. Command line interface requires user to type appropriate instructions into the command line. The computer is commanded to first go to required file or directory.

Ex: Terminal, command prompt, etc.
